Education

University of Toulouse | Lab MIAT, INRAE

Toulouse, France

PHD CANDIDATE

Oct 2023 - Present

- Working on the Nash Equilibrium computation in cooperative-competitive games.
- Implemented GPU-compatible solvers in JAX for proposed algorithms, and RL environment for application case.
- Project funded by the French-German ANR Project CHIP-GT.

CentraleSupélec

Paris, France

MASTERS IN ENGINEERING (COMPUTER SCIENCE)

August 2021 - 2023

- Specialisation in Theoretical Computer Science, and part of the Research Track (*Filière de Recherche*).
- Student in the Accelerated Engineering Degree Programme.

Mahindra University

Hyderabad, India

BACHELORS' IN TECHNOLOGY. MECHANICAL ENGINEERING

August 2017 - 2021

- Recipient of the University's Student Scholarship for Academic Excellence for 3 years.
- Member of the Organising Team TEDx (2018-19), and Vice-President of the Student Council (2020).

Experience

End-of-Studies Internship

Toulouse, France

MIAT, INRAE

Apr - Sept 2023

- Modelled Anti-Poaching as a Partially Observable Markov Game.
- Implemented a simulator using PettingZoo, with various MARL algorithms using RLlib and PyTorch.

M2 Project

Paris, France

MICS, CENTRALESUPÉLEC

Nov 2022 - Apr 2023

- Worked on the Roommate Matching problem under Rank-Envy-Free matching constraints.
- Established complexity results for such matchings, and studied their relation to existing notions.

M1 Internship

Paris, France

MICS, CENTRALESUPÉLEC

May - July 2022

- Worked on Epidemiological models to model the evolution of COVID Variants.
- Implemented numerical schemes and calibrated models using real-world data.

Visiting Student

Shantou, China

UNIVERSITY OF SHANTOU

May - July 2018

- Developed approaches based on genetic algorithms for modelling of Li-ion batteries in Electric Vehicles.
- Worked on data analysis and Experimental Design to minimise physical testing.

Teaching

Deep Learning

Toulouse, France

UNIVERSITY OF TOULOUSE

November 2024 - December 2025

- Created and taught Deep Learning using PyTorch to M2 [Mathematical Modelling of Ecological Systems](#) students.
- Course projects: Auto-Encoders for Image Segmentation and training CNN Classifiers for real-world datasets.

Skills

Programming Languages

Python, C, C++17, MATLAB, HTML/CSS (Basics)

Libraries

JAX, PyTorch, Ray/RLlib, BenchMARL, NumPy, Pandas, Matplotlib, Pytest, Sphinx

Other Software/Skills

LaTeX, Make, CMake, Bash, Git, CI/CD, Docker (Basics)

Spoken Languages

English (C1/C2), French (B2), Hindi, Telugu

Software

Anti-Poaching Environment

MIAT, INRAE

- Reference implementation of the Anti-Poaching Environment, implemented using PettingZoo.
- Implemented MARL algorithms using RLlib/BenchMARL to leverage multiple CPUs or GPU using PyTorch backend.
- Simulator implements a formally prescribed Partially Observable Stochastic Game (POSG) model.

Multi-Adversarial Team Games

MIAT, INRAE

- JAX-based, GPU-compatible implementation of the solver for Multi-Adversarial Team Games.
- Implementation scales to 4v9 games with 8 actions each, and can be vectorised to solve multiple games in parallel batches.
- Solver can be installed as a Python package.

Deep Learning Course (French)

UNIVERSITY OF TOULOUSE

- Slides and project material for Teaching course offered to Masters' students (CC-BY-4.0 License).
- Course introduces Perceptrons, Dense Networks, CNNs and RNNs, taught in PyTorch.

Journal Publications

- Yun, L., Li, W., Garg, A., Maddila, P., Gao, L., Fan, Z., Buragohain, P., & Wang, C.-T. (2019). Maximization of extraction of Cadmium and Zinc during recycling of spent battery mix: An application of combined genetic programming and simulated annealing approach. *Journal of Cleaner Production*, 218, 130–140.
- Yun, L., Maddila, P., Gao, L., Peng, X., Niu, X., Garg, A., & Chin, C. M. M. (2019). An integrated framework for minimization of inter lithium-ion cell temperature differences and the total volume of the cell of battery pack for electric vehicles. *Energy Storage*, 1(2), e41.
